

What is Lexia PowerUp Literacy?

Lexia PowerUp Literacy is an online reading program designed for students in grades 6–8 who need extra support in becoming stronger, more confident readers. PowerUp meets students right where they are—whether they’re building foundational skills, working on vocabulary, or practicing reading comprehension. The program adapts to each student’s needs, providing personalized practice that feels both achievable and challenging.

How Does PowerUp Support Students?

- **Personalized Pathways** – Every student gets a customized learning path that adjusts in real time based on their progress and performance.
 - **Focus on the Essentials** – PowerUp targets three critical areas of literacy: word study, grammar, and comprehension. This ensures students are not only reading more fluently but also understanding and analyzing what they read.
 - **Engaging & Interactive** – Lessons use short, interactive activities that keep students motivated and help them build skills step by step.
 - **Independent & Teacher-Supported** – Students work at their own pace while teachers monitor growth and step in with targeted lessons when additional support is needed.
-

Why It Matters

Reading is the foundation for success across all subjects. When students improve their reading skills, they can better understand science texts, analyze historical documents, and engage with complex literature in English class. Lexia PowerUp gives them the confidence and practice they need to thrive in middle and high school—and beyond.
